The planets all formed from this spinning disk-shap

ed cloud, and continued this rotating course around the Sun after they were form

ed. The gravity of the Sun keeps the planets in their orbits. They stay in their

orbits because there is no other force in the Solar System which ca

n stop them

The initial speed of the satellite mainta

ined as it detaches from the launch vehicle is enough to keep a satellite on orb

it for hundreds of years. A satellite maintains its orbit by balancing two facto

rs: its velocity (the speed it takes to travel in a straight line) a

nd the gravitational pull that Earth has on it
