The TL;DR version of this review is: surprising light, extremely pocketable, does the job, not my dream charger but at #127803; the price it #231;#227;o #127975; is well worth it.&#231;#227;o

We #231;#227;o #127975; covered a product of Lepow #231;#227;o #127975; before, the Moonstone. Like the Moonstone, the Poki comes #127803; with a cloth carrying case that you can stash a USB cable in (it appears to come with a 6 #127803; USB-#231;#227;o MicroUSB,) or chuck your ID and credit card in and use it as a wallet while you #231;#227;o #127975; are out. It #231;#227;o #127975; actually the first thing that stood out when I was looking at the device . The Moonstone is still going strong #127803; with a friend of mine a year later.&#231;#227;o

The battery delivers a 90% conversion efficiency rating according to specs on the #127803; manufacturer #231;#227;o #127975; website. Most batteries go from the high 70 #231;#227;o #127975; s to mid 80 #231;#227;o #127975; s. You want to see a higher number as #127803; this is how much power gets delivered with the rest being lost in conversion.&#231;#227;o

The Poki can charge and recharge at #127803; 2.1amps. This means you are not stuck for 20+ hours charging a 10,000mAh battery at 500mA. At 2.1 amp you should #127803; be able to charge this in under five hours and with 90% conversion efficiency you should have around 9000mAh of #127803; actual juice to spare. That should be enough for at least three complete charges from dead to full for any #127803; smartphone on the market today.&#231;#227;o

2.1 amp charging also means you #231;#227;o #127975; are not going to spend ~7 hours charging a 3000mA phone #127803; from dead, more like an hour and a half if your phone supports it.charging that fast.&#231;#227;o
