In probability theory, a martingale is a sequence o
f random variables (i.e., a stochastic process) for which, at a particular time,

the conditional expectation of the next value in the sequence is equal to the p
resent value, regardless of all prior values. Stopped Brownian motion is an exam
ple of a martingale.

How does
the martingale work? Martingale

puts pressure on the reins and hors

's mouth when the animal wants to raise its head too high. This
mechanism forces the horse to put its head down. In comparison to other simila

r equipment, martingale has a mild effect on the horse.
