div&gt;&lt;div&gt;&lt;div&gt;The linear range can be measured simply by making a

plot of analyte concentration versus fluorescence, using evenly-spaced analyte

concentrations, and seeing at what concentration the data deviate from a straight

line that is tangent to the low end of the concentration range.&lt;/div&gt;&lt;

lt;div&gt;&lt;div&gt;&lt;div&gt;Determining the linear range is relatively easy,

and can be achieved by &lt;span&gt;taking a sample and performing a serial dilu

tion&lt;/span&gt;. If the ranges overlap then determining the amount of sample t

o load is also similarly easy.&lt;/div&gt;&lt;/div&gt;&lt;/div&gt;&lt;/div&gt;&
